(54) **Solar power from sea**

(57) A longitudinal section of a water surface, for instance a part of the sea, where plants grow under the influence of sunlight and float between a sowing unit and a harvesting unit. The harvested plants are converted into a solid, gaseous or liquid fuel, like oil or alcohol. This

section of the sea with its related ships is preferably situated in the tropics or in the sub-tropics and at the same time in areas where little or no shipping and little and no storms are to be expected.
